

## Cim50 v2024.2 Release Notes

The latest release of Cim50, version 2024.2 is here.

This release of Cim50 is [compatible with Sage 50cloud Accounts v31](#).

Alongside providing compatibility with the latest release of Sage 50, this release also includes resolutions for any bugs logged since the release of our Cim50 v2024.1 version.

*Note: This version of Cim50 is only compatible with Sage 50 Accounts v31. Please ensure you upgrade your Sage 50 Accounts software at the same time as installing this update.*

## Minor Changes

Cim50 v2024.2 includes the following minor changes/improvements.

Module	Change Notes
Stock Control	Added a 'Status' column to the Stock Profile Purchase Orders list to indicate if a Purchase Order is 'On Order' or not.
Stock Control	When raising a new delivery note, the list view now highlights the new delivery note after raising, rather than the previously selected delivery note.
Stock Control	Improved performance when raising a credit note for a traceable item.
Bill of Materials	Improved the loading speed on the BOM Explosion screen.
Bill of Materials	Improved the performance when performing a BOM reverse build.
Planning	Added the 3 new Customer Analysis Codes added to Sage 50 into the Planning List Views.

## Bug Fixes

Cim50 v2024.2 resolves the following bugs/issues reported.

Module	Change Notes
All Modules	Resolved an issue that occurred when attempting to create a filter on a date field and the format not being correct.
Dashboards	Resolved an issue that caused the Stock Last Usage dashboard to not refresh correctly in certain circumstances.
Imports	Resolved an issue where a stock import would fail validation if the quantity and unit precision differ.
Imports	Resolved an issue where removing the part number column from the stock supplier import resulted in the supplier part number being cleared, rather than not updated.
Backups	Resolved an issue that was resulting in backups not being able to be unzipped if the original backup backed up a corrupt file.
Bill of Materials	Resolved an issue where the BOM Build Reports would display an error when attempting to view or print them.
Bill of Materials	Resolved an issue where Documents migrated from Sage 50 Manufacturing can be removed automatically when amending the BOM if the data was not populated correctly in Sage 50 Manufacturing.
Bill of Materials	Resolved an issue where the BOM Audit Log will display more decimal places than the system setting after costing via trial kitting.
Bill of Materials	Resolved an issue where the Max Build calculations would show zero if the first component in the BOM was a non-stock item.
Bill of Materials	Resolved an issue that occurred when changing an operation from a Subcontract Operation type to Standard caused an issue when saving that BOM.
Bill of Materials	Resolved an issue where the export to Excel option on Trial Kitting would export numeric fields as text.

Bill of Materials	Resolved an issue where the BOM Explosion screen would display components in the order they were added to the BOM, rather than sequence number order.
Bill of Materials	Resolved an issue that occurred when raising a works order via Trial Kitting for a BOM which contains a document that has an apostrophe in the filename.
Planning	Resolved an issue where MRP produced incorrect recommendations in scenarios where an item has aggregation enabled and firm linked replenishments on aggregated demands.
Planning	Resolved an issue that occurred in certain scenarios when attempting to import a sales forecast.
Planning	Resolved an issue that occurred when searching an MRP list view which contains a recommendation from a supplier which has a foreign currency defined and the foreign currency exchange rate is set to 0 in Sage 50.
Quotations	Resolved an issue which caused the Tax Code displayed on a copied quote to revert to T1 regardless of what was on the original quote.
Quotations	Resolved an issue that occurred when saving a quotation with a product line which has a quantity higher than 999.
Quotations	Resolved an issue that occurred when removing values from the quotation service items screen.
Quotations	Resolved an issue where the Net Discount % field would not accept decimal values.
Quotations	Resolved an issue that stopped stock item alerts from being displayed when adding items to a Quote.
Quotations	Resolved an issue where quotation item components would all show as non-stock or stock items regardless of item type when viewing a quotation.
Quotations	Resolved an issue that could, in certain circumstances, cause quotation item components to be deleted after saving a quotation.
Quotations	Resolved an issue that occurred when copying large volumes of text into the Additional Text field.
Scheduler	Resolved an issue that left orphaned capacity planning group records when removing a capacity planning group. Causing issues loading the Scheduler.
SFDC	Resolved an issue where SFDC was not respecting the Allocate Bulk Issue/Non Stock Items setting, allowing users to allocate regardless.
SFDC	Resolved a display issue where Non-Stock Items were showing 99999 free stock when issuing to a works order, rather than "N/A".
SFDC	Resolved an issue that occurred when attempting to transfer traceable stock.
SFDC	Resolved an issue that would occur when logging onto an operation which belonged to a non-stock works order.
SFDC	Resolved an issue that occurred when attempting to issue allocated stock via the Operation Log Off process, resulting in a 'not enough stock available' message being displayed incorrectly.
Stock Control	Resolved an issue when booking in a batch or serial number via a manual adjustment which was longer than 30 characters.

Stock Control	Resolved an issue that occurs when users paste data containing an apostrophe into the additional info section when maintaining stock records.
Stock Control	Resolved an issue where the columns button in the Batch Changes screen does not work correctly.
Stock Control	Resolved an issue when despatching multiple orders simultaneously to different addresses caused the order number to not be populated on the second delivery note created.
Stock Control	Resolved an issue where the aggregate demand settings would not copy over correctly when copying a stock record.
Stock Control	Resolved an issue where the Sage 50 Transaction Processing settings were being ignored, allowing users to despatch orders to on stop customers.
Stock Control	Resolved an issue that occurred when importing a stocktake count where the stocktake name is longer than 30 characters.
Stock Control	Resolved an issue when amending a traceable PO receipt, which in certain circumstances would show too many batches to select from.
Stock Control	Resolved an error that occurred when using the batch change functionality and populating a mandatory analysis code.
Stock Control	Resolved an issue where Cim50 prompts an item cannot be changed to non-stock when it shouldn't.
Stock Control	Resolved an issue that occurred when saving a stock record which contained an image file with a particularly long filename.
Stock Control	Resolved a Timeout issue that could occur when archiving traceable records.
Stock Control	Resolved an issue that occurred when importing non-traceable stock transactions, where it was validating on the unit decimal precision rather than quantity decimal precision.
Stock Control	Resolved an issue where the VAT was calculating incorrectly when using the 'Discount by Unit Price' setting in Sage 50.
Stock Control	Resolved an issue that occurred when creating a new stock record in Cim50, and the item already existed in Sage 50 and contained a supplier which used a currency with a 2 or 3 digit symbol.
Stock Control	Resolved an issue where the price would display incorrectly when being entered as .20, converting to £20 instead of £0.20
Works Orders	Resolved an issue that occurs when entering timesheets and skipping straight to entering a quantity completed.
Works Orders	Resolved an issue where the WorksOrderRecordID was showing as a user selectable column in the works order list, but did not display when selected.
Works Orders	Resolved an issue where sorting the works order list view would cause the colour highlighting functionality to disappear.
Works Orders	Resolved an issue when attempting to cancel a works order via the Work To List view would result in it displaying the works order selected in the main works order list view instead.
Works Orders	Resolved an issue which occurred when linking works orders where the system had to round the quantity that would be linked.

Works Orders

Resolved an issue where the available stock can display a negative figure when issuing multiple orders that contain the same stock item but the usage of those items between works orders are in different units of measure.
