

Cim200 Shop Floor Data Capture

Use the power of barcoding to improve accuracy and efficiency on your shop floor

This new optional module utilises the speed, accuracy and power of barcodes to provide you with the ability to process a range of stock and operational transactions with ease. Each process is streamlined to make it as efficient as possible to process, along with giving the option of automating certain associated stock processes when carrying out works order operational/processed-based tasks.

Key Functionality in Cim200's SFDC Module

Issue Stock

Issue component stock to your works orders quickly and efficiently with simple to use interfaces. Simply scan or select the works order you would like to issue stock to and then scan the item, batch or serial number barcode and confirm the quantity you want to issue.

Process Operations and Capture Labour Time

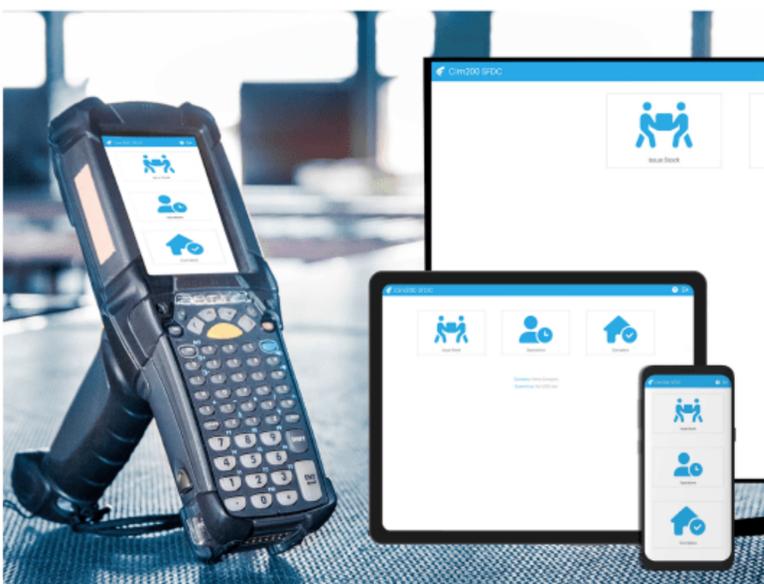

View job cards digitally and process operations through to completion. Capture the time taken at each stage accurately along with issuing associated operation components as you progress.

Complete Works Orders

Once the job is complete, book your finished items into stock simply and efficiently. If the item being completed is traceable, you can enter batch or serial number details during this process, along with associated traceable information as required.

Inspections

Inspect stock in quarantine and carry out operational inspections.

Device Agnostic

The Cim200 Shop Floor Data Capture module is **compatible with any networked device with a modern internet browser**. You can use either a traditional barcode scanner or a camera on a mobile phone or tablet to scan Cim200 barcodes.

Pricing

Cim200 Shop Floor Data Capture is an additional module on a monthly subscription basis. The cost is **£117/€146.25** per month for 1 user and additional users are priced at **£13/€16.25** each per month.
