

# Cim200 v2025 R1 Release Notes

The latest release of Cim200, v2025 R1 is here.

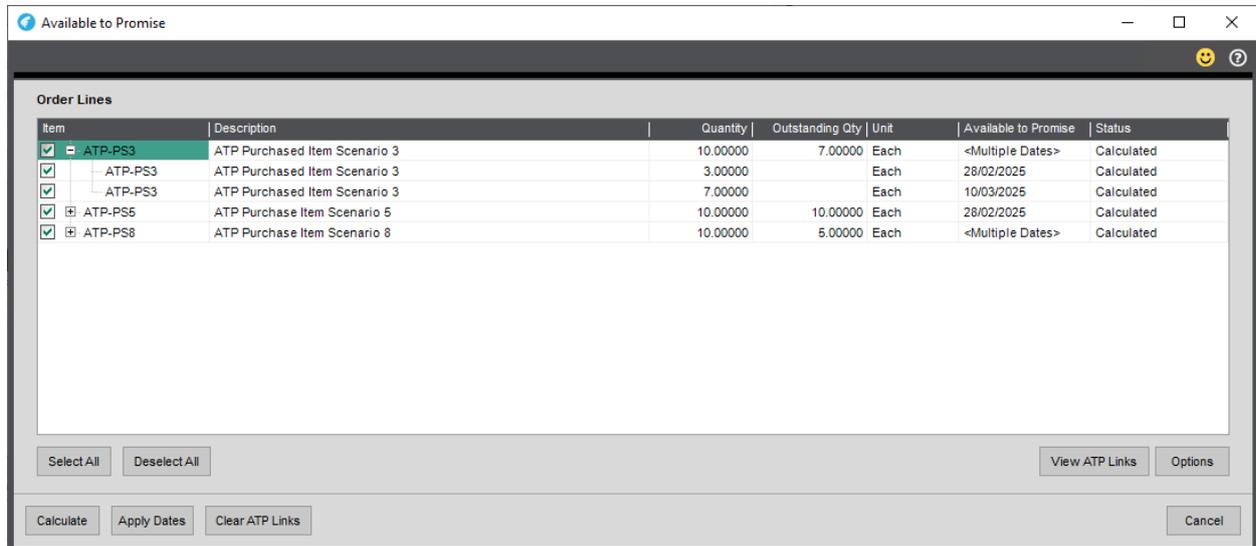

This release of Cim200 is [compatible with Sage 200 Professional v2022 R1 onwards](#). This release contains a number of exciting new features, along with bug fixes for issues logged since the release of Cim200 v2024 R3 SP4.

*Release Date: 5<sup>th</sup> March 2025*

*Add-on Version Number: 2025.00.01.100*

## Cim200 Commercials - Available to Promise

Quickly determine when you will be able to provide goods to your customer during the order entry process.

Item	Description	Quantity	Outstanding Qty	Unit	Available to Promise	Status
<input checked="" type="checkbox"/> ATP-PS3	ATP Purchased Item Scenario 3	10.00000	7.00000	Each	<Multiple Dates>	Calculated
<input checked="" type="checkbox"/> ATP-PS3	ATP Purchased Item Scenario 3	3.00000		Each	28/02/2025	Calculated
<input checked="" type="checkbox"/> ATP-PS3	ATP Purchased Item Scenario 3	7.00000		Each	10/03/2025	Calculated
<input checked="" type="checkbox"/> ATP-PS5	ATP Purchase Item Scenario 5	10.00000	10.00000	Each	28/02/2025	Calculated
<input checked="" type="checkbox"/> ATP-PS8	ATP Purchase Item Scenario 8	10.00000	5.00000	Each	<Multiple Dates>	Calculated

Provide your customers with definitive promised dates whilst creating their quotation, sales order or proforma invoice.

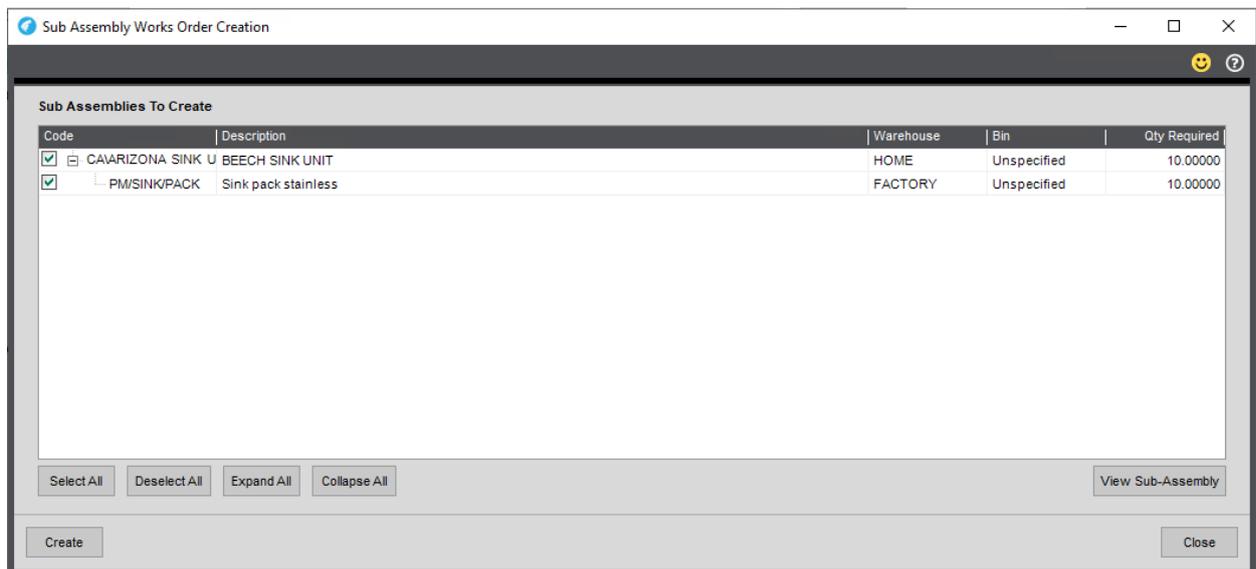

In Cim200 v2025 R1 we have added functionality to the Sales Order, Quotation and Proforma screens that utilises the data from the Cim200 Planning module, combined with analysis of replenishments that have been added to the system since your last MRP run to establish when you can promise to deliver a customer order.

Including customisable calculation options, you can configure your system to provide either single promise date per order line, or multiple dates based on when available replenishments could be shipped to the customer.

Quickly update your sales order to reflect the calculated available to promise dates, and utilise that data to determine how well you are performing on meeting your requested customer dates along with your performance in meeting your original promised dates.

## Cim200 Works Orders – Sub-assembly Creation

Raise sub-assembly works orders directly from the New Works Order screen.

After raising a new works order, either manually in the Works Order module or when raising Works Orders from Sales Orders, the system can now automatically prompt you to raise sub-assembly works orders to satisfy the works order you created, creating firm links between those orders and cutting down on the time needed to generate works orders.

# Cim200 Commercials Enhancements – Quarantine Rejection Improvements

Introducing the ability to write off or transfer rejected stock during a quarantine inspection.

The screenshot displays the 'Inspect Quarantine Record for BATCH\_COMP - Checked In 28/02/2025' window. It is divided into several sections:

- Quarantine Inspection Summary:** Quarantine no: 0000000115, Code: BATCH\_COMP, Name: Batch Traceable Component. Passed qty: 0.00000, Failed qty: 0.00000, Inspection qty: 77.00000, Total quarantine qty: 77.00000, Inspection status: Awaiting.
- Quarantine Details:** Reference: 0000000114, Stock code: BATCH\_COMP, Code: DON001, Quarantine reason: Quarantine Rejection Transfer, Name: Batch Traceable Component, Short name: Donaldso, Quarantined by: superman, Quarantined: 28/02/2025, Postcode: DN10 5MC, Quantity: 77.00000, Partial insp. type: None. Includes a 'View Supplier' button.
- Quarantine Source:** Source module: POP, Order date: 28/02/2025, Order reference: 0000003318, Receipt reference: (empty). Includes a 'View Order' button.
- Inspection Details:** Quantity passed: 66.00000, Inspection notes: Rejected from inspection 0000000114, Inspection date: 28/02/2025, Location: FACTORY, Unspecified. Includes a 'Set Batch Numbers' button.
- Rejection Handling:** Were any Rejected? (Yes selected), Rejection reason: (empty), Quantity rejected: 10.00000, Rejected date: 28/02/2025, Transfer Stock? (Yes selected), Location: Q2. Includes a 'Set Batch Numbers' button.

At the bottom, there are buttons for 'Save', 'Needed By', 'View Stock Item', 'Stock Profile', 'View POP Return', and 'Close'.

Alongside the existing ability to write-off rejected stock, Cim200 v2025 R1 includes the ability to transfer rejected stock from a quarantine inspection to an alternate location, allowing you to isolate the stock from available replenishments and hold the stock separately whilst it undergoes further testing or inspection, or until such time as it is able to be written-off.

# Cim200 Commercials Enhancements – Supplier OTIF Enquiry

Cim200 v2025 includes a new Supplier OTIF enquiry screen, enabling you to quickly visualise your supplier's performance and establish if there are any patterns or trends in suppliers providing goods to you later than required.

**Supplier OTIF Enquiry**

**Supplier**  
 Code: ABC001  
 Short name: ABCooker  
 Postcode: BL1 1FT

**Enquiry Criteria**  
 Document date from: 28/02/2023  
 Document date to: 28/02/2025  
 Include archived orders  
 Exclude orders with no requested date  
 Only show fully received lines  
 Include free text lines

**Supplier OTIF Summary**  
 Requested deliveries: 904  
 OTIF%: 99.97  
 Late deliveries: 1  
 Average days late: 7

All items  Supplier supplied items  Single item

**Order Lines** | **Stock Items**

Order No	Item	Description	Unit	Order Status	Document Date	Quantity	Received	Requested Date	Last Received Date	Overdue / Late	OTIF%

View Order... View Receipts... Close

Quickly and easily interrogate orders and receipts from the enquiry screen and interrogate the data on a per order line basis, or by stock item.

## Minor Changes

Cim200 v2025 R1 includes the following minor changes/improvements

Module	Change Notes
Imports	Cim200 Stock Import has been improved to include all new fields added to Cim200 up to and including this release. This has also now been included in the Cim200 Stock Control add-on package, rather than being a separate add-on.
Imports	Cim200 Bill of Materials Import has been improved to include all new fields added to Cim200 up to and including this release. This has also now been included in the Cim200 Bill of Materials add-on package, rather than being a separate add-on.
Planning	A new MRP list view has been added to the system, highlighting replenishments that are overdue or will be overdue.
Planning	The planning system can now be configured to utilise the 'Default Manufacturing Location' with all manufacture recommendations utilising that location.
Stock Control	Customer Part Number functionality has been extended to include a Customer Description, which can be displayed on sales paperwork.
Works Orders	Improvements have been included in the Reverse Completion functionality, allowing you to reverse a works order completion whilst the stock is in quarantine, or has passed quarantine inspection.
Works Orders	Added the ability to amend works order allocations from within the Stock Control > Allocations > Amend Allocation option within Sage 200.
Workspaces	4 new workspaces have been added to our v2025 R1 release. Two providing real time insights to the Cim200 SFDC system, a Works Order workspace showing which items are eligible to be closed, and finally a works order workspace highlighting works orders which have unconfirmed material costs.

## Bug Fixes

Cim200 v2025 R1 resolves the following bugs/issues reported.

Module	Change Notes
Bill of Materials	Fixed errors in the BOM import utility that would incorrectly state a BOM record already exists with the specified reference.
Commercials	Fixed an issue where multiple requested dates could be retained after deleting them.
Commercials	Fixed an issue where the unit cost could appear incorrectly on sales quotations for non-base currency customers.
Planning	Fixed an issue where added columns and re-arranged columns on the planning list views would lose their positions after the Sage client was restarted.
Planning	Added a new setting to prompt to provision traceable numbers when actioning works order recommendation.
Planning	Fixed an issue where the horizon replenishment lead time wasn't being picked for manufactured demand in certain scenarios.
Planning	Fixed an issue where aggregating demand with a max. manufacture quantity could cause recommendations to be generated with an incorrect recommended order quantity.
Planning	Fixed an issue where actioning aggregate bucket recommendations with manufactured and/or purchased descendants was not pulling through child recommendations.
Planning	Fixed an issue where actioning all purchased descendants was not exploding out manufactured descendants.
Stock Control	Fixed an issue that prevented customer part numbers being removed before they were saved.
Stock Control	Fixed an issue where changes to the stock item 'BOM Item Type' and 'Inactive flag' would be reported in the audit log if Sage is unable to change the item types.
Stock Control	Fixed an issue where stock reorder levels could appear on the Stock Profile MRP Stock Projection incorrectly.
Stock Control	Fixed an issue where a user could import a stocktake for a batch traceable item and bring the quantity below the allocated quantity.
Works Orders	Added a new setting for "Complete Short" to separate the ability to complete a works order regardless of component quantities and the option of completing a works order without completing the full quantity.
Works Orders	Fixed an issue that would prevent a works order being saved if base items were enabled and a component on an output item had a zero quantity.

Works Orders	Fixed an issue where subcontract postings could end up in the current waiting postings list incorrectly when post directly to nominal is enabled.
Works Orders	Fixed an issue where works order component shortfall catch-up postings could get incorrectly posted to the stock item's issue nominal account with a narrative of 'Cost of Sales' instead of the shortfall component works order's WIP nominal code.
Works Orders	Fixed an issue where allocating the same traceable component multiple times at the same time could automatically allocate traceable items incorrectly based on the stock fulfilment method.
Works Orders	Fixed an issue where you could over-issue works orders to the point of components free stock going negative.
Workspaces	Fixed an issue with the Cim200 workspaces that caused the standard View Item Details option to load without a stock item on the screen when launched from workspaces.
