

Azure Virtual Desktop for Cim200

Access your desktop and applications from virtually anywhere.

Having the ability for your business to be able to work remotely has now become an essential requirement.

Deploying remote access systems used to be expensive due to licensing costs and it's complexity.

CIM Software now offers Azure Virtual Desktop, which provides a familiar cloud-based Windows 11 experience allowing multiple users to connect remotely to access your data and applications, including Sage 200 & Cim200 Manufacturing.

This can be accessed as if they were using their office desktop from any device, which ultimately saves costs by removing additional hardware expense and using existing eligible Windows licenses.

BASIC 1-6 Users

- Premium Server
- 1 x Premium Client
- Anti-Virus
- Backup
- Support
- Always Updated
- 99.99% Uptime
